

## **Certeon Adds Future Com as a Strategic Reseller of Its *aCelera* Virtual Appliance for WAN Optimization**

*-- Future Com Extends the Reach of Certeon's Software-Based Application Acceleration Solution --*

**BURLINGTON, Mass. – October 26, 2009** – [Certeon](#), the leading provider of virtual appliance solutions for WAN optimization and application acceleration, today announces it has added Future Com as a reseller of Certeon's *aCelera* Virtual Appliance. Future Com is a supported provider of network security solutions, representing customized best fit solutions to suit any of today's networking needs.

Future Com is committed to providing clients with high performance, cost-effective and flexible networking solutions. Adding *aCelera* to its wide array of networking solutions was a direct response to customer requests. As a software-based solution for WAN optimization, *aCelera* provides Future Com customers with the level of flexibility and scalability demanded in today's virtual environment.

*aCelera* virtual appliance software products are the perfect union of virtualization and application acceleration technology, providing businesses with performance, scalability, and easy management. By utilizing *aCelera*, Future Com customers will be able to maximize application acceleration for all traffic with performance enhancements for mission-critical applications and business continuity environments, improving network bandwidth optimization and performance by more than 95 percent. When compared to proprietary hardware appliances, *aCelera* software saves IT departments up to 60 percent in capital and operations costs.

"At Future Com, we pride ourselves on listening to our customers and doing all that we can to provide a solution that directly meets their needs," states Douglas Hollenshead, CEO & President, Future Com. "Following several requests, we looked to Certeon to help Future Com deliver top quality application acceleration, and with *aCelera*, our customers can experience a solution that makes better use of their current resources and ensures the highest returns for their IT networking investments."

"Our commitment to embracing the move to virtualization and developing cost-effective and innovative products complements Future Com's vision of delivering value-added business solutions to their customers," states Peter Dougherty, Co-founder and President, Certeon Inc. "Our *aCelera* virtual appliance enables Future Com's customers to take advantage of their current resources without any heavy proprietary hardware upgrades."

Certeon was the first vendor to introduce a truly virtualized WAN optimization and application acceleration solution. Certeon's *aCelera* virtual appliance software enables

the reduction in remote application response time, increased scalability, and lower IT costs. Certeon's newly introduced *aCeler* Sync software is the industry's first virtual appliance that also dramatically accelerates disaster recovery for the business continuity market, without requiring costly proprietary hardware appliances.

### **About Certeon**

Certeon's *aCeler* software is the first WAN optimization and application acceleration virtual appliance to deliver acceleration, scalability, and manageability when remotely accessing applications throughout a distributed enterprise. *aCeler* software reduces application response time over the WAN by more than 95 percent without proprietary hardware appliances. *aCeler* performance scales linearly as more resources are added (i.e., CPU, memory, and disk) and supports up to 50 percent more concurrent accelerated connections than "closed" proprietary hardware appliances. Enterprises and managed service providers can save as much as 60 percent in total cost of ownership (TCO) when deploying *aCeler* software to virtualized infrastructures. *aCeler* is flexible and easy to deploy, delivering faster, more scalable application acceleration to more users. For more information visit [www.certeon.com](http://www.certeon.com).
