

## **Certeon to Present at 2009 IBM Rational Conference**

*-- Certeon to Showcase Real-Life Examples of How aCelera Optimizes IBM Rational Application Performance over the WAN --*

**BURLINGTON, Mass. – May 26, 2009** – [Certeon](#), the first and only software-based application acceleration and WAN optimization solution for software configuration management environments, today announced that Charles Kraus, Senior Director of Business Development for Certeon, will speak at the 2009 IBM Rational Conference on June 4, 2009 in Orlando, Fla.

On Thursday, June 4th, Mr. Kraus will present a session on optimizing Wide Area Networks (WAN) performance for IBM Rational applications. Using real-life performance test results and customer case studies, this session will discuss how Certeon's aCelera application acceleration software cost-effectively reduces IBM Rational ClearCase and ClearQuest transaction times over the WAN by as much as 95%.

In addition, this presentation will discuss Certeon's Ready for IBM Rational Software Validation effort, as well as data collected from customer evaluations. These customer case studies show how aCelera can dramatically improve IBM Rational developer productivity over the WAN with rapid ROI—saving over 60% in capital and operational TCO.

Attendees of the IBM Rational Software Conference 2009 will learn about the solutions to drive measurable business differentiation while lowering the cost of software and systems delivery. The 2009 conference will run from May 31 - June 4, 2009 at the Walt Disney World Swan and Dolphin Resort in Orlando, Florida. Certeon will also be exhibiting and demonstrating its aCelera solution at the conference in Booth #607.

Certeon's aCelera Virtual Appliance with Application Acceleration Blueprint for IBM Rational significantly reduces ClearCase and ClearQuest application response time over

the WAN, enabling a more reliable, real-time, and high-performance remote development capability. Critical ClearCase and ClearQuest transactions such as load and update view can take multiple minutes to complete with typical WAN latencies. With Certeon aCelera virtual appliance software, users can reduce the response time of these transactions to mere seconds. The improvement in network bandwidth performance and IBM Rational application responsiveness cuts down on time-consuming and costly time-outs while waiting for large documents to synchronize. Remote source control management becomes more efficient and reliable, increasing developers' productivity.

### **About Certeon**

Certeon's *aCelera* software is the first and only application acceleration virtual appliance to deliver acceleration, virtualization, and manageability when remotely accessing applications throughout a distributed enterprise. *aCelera* software reduces application response time over the WAN by more than 95 percent without proprietary hardware appliances. *aCelera* is optimized for mission-critical applications such as: application virtualization and management, software configuration management, enterprise content management, Web-based collaboration, and wide area file services. *aCelera* is flexible and easy to deploy, delivering faster, more scalable application acceleration to more users. Certeon enables distributed enterprises to dramatically reduce their TCO and gain a faster ROI when compared to proprietary hardware appliances. Founded in 2003, Certeon is a private company, headquartered in Burlington, Mass. For more information, visit [www.certeon.com](http://www.certeon.com) or call 781-425-5200.
