Certeon Adds Inet to Partner Program to Speed SharePoint Deployments in Central America

BURLINGTON, Mass. – January 22, 2008 – [Certeon](#), the industry’s only vendor to securely accelerate mission-critical applications effectively, today announces the addition of [Inet Consulting Services](#) to its [Partner Acceleration Program](#) as a systems integrator. Inet’s customers deploying Microsoft® SharePoint® will now benefit from the unique ability of Certeon’s S-Series™ Application Acceleration Appliances to speed SharePoint access across the Wide Area Network (WAN).

Certeon’s S-Series Appliances achieve unparalleled SharePoint acceleration by leveraging an embedded Application Acceleration Blueprint™ for Microsoft SharePoint and Microsoft Office SharePoint Server (MOSS). The Application Acceleration Blueprint relies on built-in knowledge of SharePoint application objects to turbo-charge response times across the WAN. The result for Inet customers is greater productivity and the ability to maximize existing infrastructure investments.

“Our customers rely on SharePoint as a key tool for information delivery and collaboration,” said Ernesto Garay, an Inet systems infrastructure consultant in the business services division.

“Information delivery and collaboration become significantly more difficult when the inherent limitations of the WAN are brought into play. The Certeon S-Series appliances are vital to enabling information delivery and collaboration across the extended enterprise.”

Inet is a Microsoft Gold Certified Partner that specializes in providing consulting services to add value to existing IT products or services. Inet is the premiere Microsoft consulting partner in the Central America region for SharePoint implementations. This provides a natural synergy with Certeon, as Certeon is the only application acceleration vendor to provide built-in knowledge of the application protocol specific to SharePoint and MOSS. As such, Certeon is able to achieve acceleration levels well-above the industry norm.

“At Certeon, we take a unique approach to application acceleration that enables our customers and partners to optimize the performance of collaborative infrastructures,” said Peter Dougherty, president and CEO of Certeon. “Certeon’s application acceleration solutions facilitate SharePoint and MOSS deployments and speed application response times for improved user productivity.”

Certeon’s S-Series appliances provide a cost-effective, high-performance solution that addresses the real-world problem of speeding information delivery and collaboration from multiple remote locations. Certeon offers three models of its Application Acceleration Appliances: the S-1000, S-2000 and S-3000, supporting small branch offices, regional offices and large data centers, respectively. In addition to the Application Acceleration Blueprints for Microsoft SharePoint, Certeon also offers Blueprints for EMC® Documentum® and eRoom, 2007 Microsoft Office™, MOSS 2007, Microsoft File Services (CIFS) and Office 2003, as well as UGS Solid Edge™. Certeon’s S-Series accelerates all WAN traffic, including encrypted SSL traffic, to ensure end-to-end data security and integrity.

About Certeon

Certeon’s S-Series Application Acceleration Appliances provide the industry’s only solution with Application Intelligent Networking to deliver application acceleration, security and scalability from the desktop to the data center. Certeon’s patent-pending S-Series appliances accelerate all WAN traffic and are optimized for distributed content delivery and collaboration applications such as: enterprise content management, work flow and process management, Web portals and search. S-Series appliances are the only solution to securely accelerate encrypted traffic (SSL) with the same performance improvements as unencrypted traffic. The appliances minimize network traffic to significantly improve application response times, while maintaining end-to-end security. Founded in 2003, Certeon is a private company, headquartered in Burlington, Massachusetts with European offices in The Netherlands. For more information, visit www.certeon.com or call 781-425-5200.

About Inet

Inet is a Microsoft Gold Partner, with several competencies across Microsoft’s server solutions. Inet focuses on adding value and efficiency to internal corporate processes with Microsoft’s SharePoint 2007 Portal Solution, as well as building on top of this platform for application integration and centralized document management. Inet takes care of design, sizing, implementation, and Intranet design and roll out for its clients. Inet has rolled out numerous SharePoint Implementations, with many of its clients spanning the Central American region in all sectors, from government, financial services, real estate development companies, as well as telecommunications companies.
